

Preparation for treatment with Pest Control Guru's NATURAL **BED BUG** Bio-Pesticide

You have been scheduled for treatment at

 T I M E on D A T E
for Bed Bug Treatment

Our web page <https://www.pestcontrolguru.ca/bed-bugs.html> has more information for you including a short 1-minute video on how our Bio-Pesticide works for you in eradicating bed bugs.

For treatment, we need you to provide us access to spray the baseboards around the whole house (for sure in the bedrooms) and remove and wash the bedding from the beds for treatment day. Re-entry for people and pets will be allowed 4 hours after the treatment is complete.

No need for multiple treatments! When one bed bug contracts our contagious fungus disease it passes it on to all the others it comes in contact with. Our FUNGUS barrier is active for up to 3 months if it's not wiped off providing you with both a long-term effect and prevention of future outbreaks.

We arrive in non-marked vehicles and do not wear uniforms.
